

## // Secure Suite

Robust access control for colocation to meet compliance or regulatory for physical security.

Secure Suite is a service option that lets you wrap your infrastructure with the right level of physical security to meet the needs of your business. Colocation with Cyberfort already comes with an impressive level of physical security. However, when you need greater assurance, our Secure Suite service provides added peace of mind.

For customers that need to demonstrate a robust approach to data and system security by controlling and restricting physical access, Secure Suite offers the convenience of a 'datacentre within a datacentre' without the complexity and expense of building a facility. As a minimum standard The Bunker Secure Suite offers superior levels of physical security to any comparable data centre in the UK.

### Key Features

#### Secure Cages

Highly secure cages or private rooms suitable for meeting compliance or any other requirement for the assurance of restricted physical access.

#### Select Access Control

Choose the access control and security devices that are appropriate for your needs including CCTV, single/dual keypads, safes and remote monitoring.

#### Data Security Assurance

End-to-end assurance of secure data and media handling over its lifecycle with offsite backups and WEEE regulated media destruction.

#### Mirror Sites

Replicate data and infrastructure to an identical or alternatively specified Secure Suite at our Ash or Newbury sites as required.

### KEY BENEFITS

#### 'Datacentre within a Datacentre'

Meet compliance or demonstrate your robust approach to data and systems security to partners without the cost of building your own.

#### High levels of physical security

Meet UK, EU, US, international or internal corporate compliance standards.

#### Compliance Ready

N3 / PSN / IL / PCI DSS approved for central and local government, the NHS and the payment card industry.

#### Secured for Government, Public Services and Finance

Get the highest level of standard physical security of any comparable data centre in the UK.

## Access control expertise for assured physical security of data and infrastructure

Cyberfort's highly secure and high availability UK-based facilities at Ash and Newbury are the data centres of choice for our security conscious customers. Our Secure Suite Service is designed to give customers total peace of mind.

When you collocate and opt for a Secure Suite with The Bunker you work with experts that understand the requirement for high levels of physical security to protect data and systems. You might simply need a locked cage or room. However, when you need more sophisticated access control our physical security experts will deploy and maintain the right measures.

### Why do so many security oriented businesses choose to partner with us?

Cyberfort's Secure Suite customers form a significant segment. The range includes businesses and public sector organisations of many types including healthcare, local authorities and financial services. Secure Suite customers choose us for these key reasons:

- **Business with confidence**
  - "Don't worry about security, focus on core activity"
- **Uncompromising security**
  - "Security is the foundation of our business"
- **Microsoft and Open Source**
  - "We have extensive in-house expertise in both"
- **Recognising our value**
  - "Customers realise measurable ROI from our services"
- **Certainty over security**
  - "UK-only data centres avoid sovereignty and privacy issues"
- **Trusted partner**
  - "We build enduring relationships that deliver mutual benefit"

Join the growing numbers of organisations that recognise the value Cyberfort adds to their businesses.

### Professionally accredited and Recognised Services

Our many certifications, awards, memberships and technical competencies underpin our reputation as a leading centre of excellence for delivering secure data centre services and solutions. Customers have the peace of mind that Cyberfort possesses the experience, qualifications and associations needed to supply the high levels of security, resilience and service performance expected.

### A service portfolio that flexes and adapts to your needs

Cyberfort's service portfolio provides different ways for businesses to obtain services that support their core business. This provides each Secure Suite customer with the assurance that however your business or the supporting technology might change, we are able to flex and adapt our services to meet your needs.
